# Removing Barriers for Recovery

## We Listen, We Learn, We Evolve

A Public Forum for Patient Safety in Mental Health

### Tell us what you think!

One in five Canadians will experience a mental illness in his or her lifetime. 90% of Canadians who commit suicide have a diagnosable mental illness. Do stigmas about mental health affect patient safety? What are the factors that affect patient safety in mental health? This is an excellent opportunity for service providers and policy makers to learn from and with persons with a lived experience of mental illness and their family members about barriers and facilitators to patient safety in mental illness and mental health agencies and programs.

For Forum information visit  
[www.mbips.ca](http://www.mbips.ca) or call **204-927-6477**

**Wednesday, May 5, 2010** 6:30 pm. - 8:00 pm.  
St. Boniface Research Centre  
351 Taché Avenue, Winnipeg
